

Cooling capacities smaller 2 kW. VKD/VKS series – Cooling systems for medical and commercial applications.

Reliable and maintenance-free. Hermetically sealed refrigerant circuit prevents refrigerant leakage.

Flexible use. Also at high ambient temperatures up to approx. + 45 °C.

Small & compact. Customisable to any installation space.

Sustainable & future-proof. The use of natural refrigerant reduces the indirect environmental impact to a minimum.

Durable. High-quality components from renowned manufacturers ensure long, trouble-free operation.

VKD/VKS series.

Cooling systems for medical and commercial applications.

Stable temperatures are a requirement for functioning commercial cooling systems to ensure the highest quality standards. Riedel Kooling systems provide permanent and constant cooling for applications: The dynamically (VKD series) and statically (VKS series) ventilated chillers are used in the medical, medical storage and laboratory segments as well as in the environmental technology, catering & process cooling sectors.

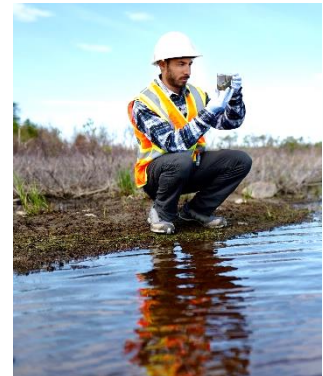

Medicine & laboratory.

- + Refrigerator and freezer for laboratory
- + Analytical systems for serum tests and blood grouping
- + Refrigerators for the storage of blood and medicines
- + Community refrigerators
- + Mortuary refrigeration

Environmental technology.

- + Water and wastewater analysis
- + Water sampler
- + Precipitation analysis systems

Gastronomy & process cooling.

- + Transport trolley for communal catering
- + Small refrigerated compartments / showcases for breakfast and cakes
- + Wine refrigerators
- + Beer keg cooling
- + Large refrigerators
